

[Insert title of invention]System for Multiple Signers on an Electronic Card and Gift

Abstract of Disclosure

The current invention is a viral group greeting cards Internet service. It is a method and process that is an electronic greeting card service that utilizes the distributed access afforded by the Internet or local area networks (LANs) to enable the collection of greetings from multiple users on a single greeting card and its delivery to a recipient. It also allows for the pledges and collection of funds from multiple parties for a gift.

Figures

Figure 1: A line graph showing the relationship between the number of hours spent studying and the score on a test. The x-axis represents 'Hours Studied' (0 to 10) and the y-axis represents 'Test Score' (0 to 100). The data points are as follows:

Hours Studied	Test Score
0	50
1	55
2	60
3	65
4	70
5	75
6	80
7	85
8	90
9	95
10	100

The graph shows a positive linear relationship, indicating that as the number of hours spent studying increases, the test score also increases proportionally.
